

**Test Technician**

**November 2018**

**We believe in the sustainable production of clean water.**

**DO YOU?**

Desolenator is a clean-technology start-up developing a patented technology that uses solar power to purify water from any source.

We will be executing our first projects with our technology over the coming year and you can help us develop our best products yet. We are looking for the support of a Test Technician for our team, to test existing Desolenator products for optimization and improvement purposes. Product tests include 1) durability tests (corrosion of materials), 2) product water quality tests, and 3) system control tests to comprehend and improve the control mechanism. In this role you will also perform calibration tests under real-world conditions in locations where the global water crisis is a reality.

This role will initially be fixed to 1 year. We foresee that you would be based at our workshop in Zuid Limburg but you may at times have the opportunity to test in world conditions at our projects in Africa, the Middle East and Asia.

**Required skills & experience:**

Associate Degree in Engineering Technology with previous testing experience with products in thermodynamics

Has previous "hands-on" technical experience and is able to operate mechanical tools

Experience sourcing equipment

Logical & detailed thinker

Takes initiative and leadership over tasks

Is entrepreneurial & a self-starter

Able to work independently and in teams

Determination to tackle the global water crisis & looking to make a positive impact on the world
